# 65XE & 130XE 8-BIT PERSONAL COMPUTERS

## *At home anywhere.*

Still the best computing value around. The Atari 65XE™ and 130XE™ are workhorses for small business, home, and educational tasks.

These versatile, full-color computers are at home anywhere. They connect directly to your TV for still greater savings and picture-perfect performance.

Typing reports, homework assignments, and business papers has never been easier. The library of software programs for XE™ computers is one of the most extensive for any computer. Pop in AtariWriter Plus™ and you are able to write, edit, and automatically correct your spelling. Spreadsheet, database, and check-writing programs are just the tip of the iceberg. And for education there is a science lab series, including Atari Planetarium™ and music and art programs. XE computers feature Atari's custom sound and graphics chips, with 256 vivid colors. And if that's not good enough, built-in Atari BASIC™ lets you write your own programs.

When it's time to relax, your Atari XE personal computer turns into a family entertainment center. Choose from adventure games, sports and strategy games, high-speed games of skill, and educational challenges.

We've made a computer with a superior clock speed, faster than other 8-bits. There are a number of available peripherals, including the new XF551™ double-sided 5¼-inch disk drive, XMM801™ dot-matrix printer, and modems for data communication. All at a very low price.

The Atari 65XE and 130XE personal computers. Packed with power. Performance. And value, too!

### MEMORY

- 130XE: 131,072 bytes RAM; 65XE: 65,536 bytes RAM
